PrairieCreekSeed.com

Date: 3/12/18

Prairie Creek Seed is a company that is committed to bringing the best products and practices to our customers. We have carefully selected our product offerings based off of their high yield potential and, feed or forage quality. We also select for disease and pest resistance, compatibility with other species and regional adaptability. We support and encourage the use of organic seed and seeds that fit biological farms. All varieties were produced using traditional crossbreeding techniques. No genetically modified organisms (GMOs) were used in their production unless clearly marked and marketed as such. No pesticide seed treatments are used. The rhizobia legume seed inoculants are Prevail, Nitragin Gold or N-Dure. Both are natural occurring rhizobial bacteria and are accepted inoculants. All varieties are untreated, or if a seed coating was used, the Non-GMO Statement, or OMRI listing will be attached.

Any of the products listed below at this time are either not available as certified organic production through Prairie Creek Seed or the organic version of the product is sold out.

Type of Seed	Variety/Blend Name
